SUBMISSION AND/OR APPROVAL OF A DRUG PRIOR AUTHORIZATION REQUEST DOES NOT GUARANTEE MEDICAID PAYMENT FOR PHARMACY PRODUCTS OR THE AMOUNT OF PAYMENT. ELIGIBILITY FOR AND PAYMENT OF MEDICAID SERVICES ARE SUBJECT TO ALL TERMS AND CONDITIONS AND LIMITATIONS OF THE MEDICAID PROGRAM.  
**Confidentiality Notice:** This communication, including any attachments, is for the sole use of the intended recipient(s) and may contain confidential and privileged information. Any unauthorized review, use, disclosure or distribution is prohibited. If you are not the intended recipient, please contact the sender by reply telephone (1-877-537-0722) or fax (1-877-537-0720) and destroy all copies of the original message. 05/05/2017

# PRIOR AUTHORIZATION DESCRIPTION

## **Familial Hypercholesterolemia: REPATHA™ (evolocumab) and PRALUENT® (alirocumab)**

### ***Appendix A: Statin Contraindications***

- Decompensated liver disease (symptoms can include jaundice, pruritus, ascites, variceal hemorrhage, or hepatic encephalopathy).
- Immune-mediated hypersensitivity to the HMG-CoA reductase inhibitor drug class (statins) as evidenced by an allergic reaction occurring with at least TWO different statins
- Laboratory-confirmed acute liver injury resulting from statin treatment
- Laboratory-confirmed rhabdomyolysis resulting from statin treatment
- Women who are breastfeeding, pregnant or are actively trying to become pregnant

### ***Appendix B: Zetia Contraindications/Reasons to Discontinue***

- Moderate or severe hepatic impairment (CP classes B and C)
- Women who are breastfeeding/pregnant or are actively trying to become pregnant
- Immune-mediated hypersensitivity to the cholesterol absorption as evidenced by an allergic reaction including anaphylaxis, angioedema, rash, or urticaria

### ***Appendix C: A moderate-intensity statin may be more appropriate for the following adult populations if not able to tolerate a high-intensity statin***

- Multiple or serious comorbidities, including impaired renal or hepatic function
- Unexplained ALT elevations >3 times ULN
- Active liver disease
- History of previous statin intolerance or statin-related muscle disorder
- Patient characteristics or concomitant use of drugs affecting statin metabolism
- $\geq 75$  years of age
- History of hemorrhagic stroke
- Asian ancestry

### **Clinical atherosclerotic cardiovascular disease (ASCVD) includes:**

- Acute coronary syndromes, or history of myocardial infarction, stable or unstable angina, coronary or other arterial revascularization, stroke, transient ischemic attack, or peripheral arterial disease presumed to be of atherosclerotic origin.

# PRIOR AUTHORIZATION DESCRIPTION

Low-Intensity Statin Therapy	Moderate-Intensity Statin Therapy	High-Intensity Statin Therapy
Daily dose lowers LDL-C by < 30%. on average	Daily dose lowers LDL-C by 30% to 50%. on average	Daily dose lowers LDL-C by ≥ 50%. on average
<ul style="list-style-type: none"> <li>• Simvastatin 10 mg</li> <li>• Pravastatin 10-20 mg</li> <li>• Lovastatin 20 mg</li> <li>• Fluvastatin 20-40 mg</li> <li>• Pitavastatin (Livalo) 1 mg</li> </ul>	<ul style="list-style-type: none"> <li>• Atorvastatin 10-20 mg</li> <li>• Rosuvastatin 5-10 mg</li> <li>• Simvastatin 20-40 mg</li> <li>• Pravastatin 40-80 mg</li> <li>• Lovastatin 40 mg</li> <li>• Fluvastatin XL (Lescol XL) 80 mg</li> <li>• Fluvastatin 40 mg twice daily</li> <li>• Pitavastatin (Livalo) 2-4 mg</li> </ul>	<ul style="list-style-type: none"> <li>• Atorvastatin 40-80 mg</li> <li>• Rosuvastatin 20-40 mg</li> </ul>

Criteria	Points
<b>Family History</b>	
First-degree relative with known premature* coronary and vascular disease, <b>OR</b> First-degree relative with known LDL-C level above the 95 <sup>th</sup> percentile	1
First-degree relative with tendinous xanthomata and/or arcus cornealis, <b>OR</b> Children aged < 18 years with LDL-C level above the 95 <sup>th</sup> percentile	2
<b>Clinical History</b>	
Patient with premature* coronary artery disease	2
Patient with premature* cerebral or peripheral vascular disease	1
<b>Physical examination</b>	
Tendinous xanthomata	6
Arcus cornealis prior to age 45 years	4
<b>Cholesterol levels mg/dL (mmol/liter)</b>	
LDL-C ≥330 mg/dL (≥8.5)	8
LDL-C 250 – 329 mg/dL (6.5 – 8.4)	5
LDL-C 190 – 249 mg/dL (5.0 – 6.4)	3
LDL-C 155 – 189 mg/dL (4.0 – 4.9)	1
<b>DNA analysis</b>	
Functional mutation in the <i>LDLR</i> , <i>apo B</i> or <i>PCSK9</i> gene	8
<b>Diagnosis (diagnosis is based on total number of points obtained)</b>	
Definite familial hypercholesterolemia	>8
Probable familial hypercholesterolemia	6 – 8
Possible familial hypercholesterolemia	3 – 5
Unlikely familial hypercholesterolemia	<3

\*Premature – men < 55 years or women < 60 years      Apo B= apolipoprotein B

LDL-C= low density lipoprotein cholesterol; LDLR=low density lipoprotein receptor    FH=familial hypercholesterolemia

PCSK9=Proprotein convertase subtilisin/kexin type 9

SUBMISSION AND/OR APPROVAL OF A DRUG PRIOR AUTHORIZATION REQUEST DOES NOT GUARANTEE MEDICAID PAYMENT FOR PHARMACY PRODUCTS OR THE AMOUNT OF PAYMENT. ELIGIBILITY FOR AND PAYMENT OF MEDICAID SERVICES ARE SUBJECT TO ALL TERMS AND CONDITIONS AND LIMITATIONS OF THE MEDICAID PROGRAM.

# CRITERIA/ADDITIONAL DOCUMENTATION

## Heterozygous Familial Hypercholesterolemia WITH ASCVD (HeFH) with ASCVD

### BENEFICIARY INFORMATION

Beneficiary ID: _____ - _____ - _____	DOB: _____ / _____ / _____
---------------------------------------	----------------------------

Beneficiary Full Name: \_\_\_\_\_

### Heterozygous Familial Hypercholesterolemia (HeFH) with ASCVD Criteria

#### REPATHA™ (EVOLOCUMAB) and PRALUENT® (ALIROCUMAB)

Initial Approval Criteria for Repatha™ (evolocumab) or Praluent® (alirocumab) may be approved when the following criteria are met:

<input type="checkbox"/> Yes <input type="checkbox"/> No	The member is ≥ 18 years of age.
--	----------------------------------

**AND**

<input type="checkbox"/> Yes <input type="checkbox"/> No	Repatha™ (evolocumab) or Praluent® (alirocumab) must be prescribed by or in consultation with a cardiologist, endocrinologist or lipid specialist and there is clinical documentation for a diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD), defined as one of the following: acute coronary syndrome, history of myocardial infarction, stable or unstable angina, coronary or other arterial revascularization, stroke, transient ischemic attack, or peripheral arterial disease presumed to be of atherosclerotic origin.
--	--

**AND**

<input type="checkbox"/> Yes <input type="checkbox"/> No	Unable to meet LDL-C goal after treatment of at least 2 sequential 12-week trials of different high intensity statins [(i.e., atorvastatin ≥40mg or rosuvastatin ≥ Fc20mg] with at least one concomitant 12-week use of Zetia (ezetimibe) 10mg UNLESS contraindicated or not tolerated. (See Appendices A and C). Suboptimal response is defined as where: <ul style="list-style-type: none"> <li>• LDL-C is known: &lt;50% reduction in LDL-C from pre-treatment levels</li> </ul>
--	---

**AND**

<input type="checkbox"/> Yes <input type="checkbox"/> No	The member will be using the PCSK9 inhibitor concomitantly with a maximally-tolerated statin unless statin intolerant (See Appendices). In ASCVD patients with/without comorbidities*, who are on maximally tolerated statin-ezetimibe or non-statin combination therapy in the setting of documented statin intolerance, who achieve a less-than-anticipated response with <50% reduction in LDL-C, it is reasonable to prescribe alicumab or evolocumab (in addition to or in place of ezetimibe) as second step to achieve further LDL-C reduction. *Comorbidities defined as: diabetes, recent (<3 month) ASCVD event, ASCVD event while already on statin, poorly controlled risk factors, elevated lipoprotein or chronic kidney disease not on hemodialysis. If a PCSK9 inhibitor is prescribed, clinicians should continue maximally tolerated statin and monitoring for adherence to medications and lifestyle, side effects, and ongoing LDL-C response to therapy. Adherence to current statin regimen must be evidenced by consistent pharmacy claims over the past 12 weeks, unless new to Medicaid.
--	--

#### Recommended Dosing Regimen and Authorization Limit

Drug	Dosing Regimen
Praluent®	150 mg SC Q 2 weeks
Repatha™	140mg SC Q 2 weeks

#### Reauthorization Criteria:

<input type="checkbox"/> Yes <input type="checkbox"/> No	Criteria outlined for initial Prior Authorization has been satisfied;
--	---

**AND**

<input type="checkbox"/> Yes <input type="checkbox"/> No	Is there clinical evidence of ongoing concomitant lipid lowering therapy (statin, ezetimibe, unless contraindicated / not tolerated);
--	---

**AND**

<input type="checkbox"/> Yes <input type="checkbox"/> No	Documentation of a LDL-C reduction from pretreatment level by ≥ 50% after adding Repatha (evolocumab) or by ≥ 40% after adding Praluent® (alirocumab) for at least 90 days of therapy.
--	--

#### Authorization

**Initial:** If approved, initial coverage will be granted for up to 12 weeks.

**Maintenance:** If approved, maintenance coverage will be reauthorized for periods of up to 52 weeks.

**APPENDICES AND TABLES CAN BE FOUND IN THE INSTRUCTION SHEET**
